WEATHER SUMMARY

A warm up from previous days weather will drop relative humidity. Fuel will react to the lower RH and higher temperatures to present more active burning conditions. The inversion that has dominated the area still has a good chance of remaining over the area hampering visibility. SEE ATTACH INCIDENT WEATHER FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

Probability of Ignition = 50%.

Spotting Distance= 1/3 mile

Energy Release Component in Timber Fuels are at 90th percentile levels or above.

Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%)*Both at Critical level***

The fire continues to consume timber understory with some isolated tree torching. Rollout and slope reversal still continue to make more active runs and may challenge control lines. The fire area has no fire history in the last 50 years and no known thinning or fuel modification. Nighttime firing operations have been successfully consuming fuel under high relative humidity.

SPECIFIC

Branch I

Interior island in steep terrain may send burning material over control lines. Depth of previous burn operations may be tested if jackpots of unburned become active. Torching trees will send broadcast embers up to **1/3** of a mile. The fire has been relatively quiet but with warmer temperatures and lower RH we can prepare for increased activity toward the afternoon hours when the solar radiation will heat fuels.

Branch II

Rolling material and slope reversal continued to aid in moderate runs that may compromise crews and control lines. Look for the rates of spread up to **14 ch/h** and flame lengths up to **9 ft**. Spotting from torching trees could send embers out to **1/3 of mile**. Crews working on indirect line need keep a lookout toward the main fire to ensure they have enough reaction time to travel to safety zone. Warmer weather may mimic conditions of the past when we experienced increase activity in the afternoon Any night firing operations can expect max relative humidity up to 70% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

Branch IV

Established spot fires on the east side of the Eel River they may push toward crews working on indirect line on Division P, W and Y. Rates of spread can be up to **14ch/h** and have **9 ft** flame lengths. The fire has mostly been burning in a timber understory but there is a moderate amount of brush in Branch IV and rates of spread will increase to **25 ch/h** and flame lengths will exceed **12 ft** is any up hill runs become established. Safety zone for expected fire behavior should be no less then 1/2-1 acre in diameter. Any night firing operations can expect max relative humidity up to 70% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

AIR OPERATIONS:

Heavy canopy will cover may obstruct crews working under trees

Inversion may not lift making visibility poor and may restrict air operations.

SAFETY

- Don't let complacency compromise your safety, the potential for large scale growth is still possible
- Changing weather will bring a change in fire behavior plan all operations with that in mind
- Rollout and slope reversal have challenged suppression efforts each operational period, identify the potential for changing fire spread

SAFETY MESSAGE

“LODGE COMPLEX”

CA-MEU 7202 August 6, 2014 0700-0700

FATIGUE

FATIGUE MAY COMPROMISE SAFETY!

Be on the lookout for signs of fatigue – look out for one another - Look For:

- Chronic feelings of exhaustion, feeling “spacey”.
- Impaired decision-making and judgment • Low motivation • Moodiness.
- An inability to pay attention and short-term memory problems, confusion.
- Slowed reflexes and responses.

Mitigation – Proper nutrition reduces fatigue

- Eat foods, which provide steady energy • limit sugary, fatty, fried foods.
- Hydrate - proper hydration prevents fatigue.
- Manage work rest ratio while performing work.
- Take full advantage of time off line to rest.

TOPOGRAPHY

TOUGH COUNTRY TO WORK IN!

Be on the lookout for topography driven fire conditions and loose rocks and boulders throughout the incident area.

- Steep slopes may cause rolling material hazards.
- This terrain will cause quick, unexpected upslope fire behavior.
- Significant slip hazard exist throughout the incident.

Mitigation – Maintain high level of situational awareness.

- Post lookouts and monitor changes in fire behavior.
- Watch out in areas with steep slopes and watch your footing.
- Listen for rolling rocks and boulders and ‘yell out’ to others around you.

SNAGS

AS THE FIRE REACHES CONTROL LINES THE POTENTIAL RISK WILL PEAK

The fire has had a significant impact to the health and stability of trees

- Ground cover has burned losing the stability of the root system.
- Heavy timber dominates the fire area creating a high risk for snags and tree fall.

Mitigation– Be on the lookout for hazard trees and situations

CAL FIRE

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
